I. ACCOMPLISHMENTS IN THE USE OF ELECTRONIC DIGITAL COMPUTERS

A Control Data G-15 computer was installed at the Research and Development Laboratory on 23 October 1961. This computer has since been used for the solution of laboratory-type problems in two basic areas of responsibility of the R&D Laboratory.

- a. Analysis and Appraisal: The solution of repetitive problems frequently encountered in the technical evaluation of electronic equipment.
- b. Design: The solution of laboratory-type problems encountered in the basic design of electronic circuitry for the Office of Communications.

Plans for the Future

The existing Control Data G-15 computer is adequate to our needs at the present time, and for the foreseeable future. Hence, there are no plans for further computer activity in the Laboratory.
